

Alexa Fluor® 594 anti-Chk2 Antibody

HeLa cells were fixed with 4% paraformaldehyde (PFA) for 15 minutes, permeabilized with 0.5% Triton X-100 for three minutes, and blocked with 5% FBS for 60 minutes. The cells were intracellularly stained with 0.5 µg/ml Alexa Fluor® 594 anti-Chk2 antibody (clone P81C12B8) overnight at 4°C. Actin filaments were labeled with Alexa Fluor® 488 Phalloidin (green). Nuclei were counterstained with DAPI (blue). The image was captured with a 60X objective.
