

Purified anti-mouse CD34 Antibody

NIH3T3 cells were fixed with 1% PFA and then stained with 10 $\mu\text{g}/1\text{ml}$ purified CD34 (clone MEC14.7) for 3 hours at room temperature. The cells were then stained with 2.5 mg/ml anti-rat IgG Dylight™ 594 secondary antibody (red) for 1 hours at room temperature. The nuclei were counterstained with DAPI and are shown in blue. The image was captured by 40X objective.
